RESEARCH INTERESTS

My research is motivated by an overarching goal of *transforming complex, contradictory, and challenging issues into opportunities so that people and society can thrive*. Our mindset is a powerful lens to see the world and can have profound impacts on our psychological and physical wellness. My program of research seeks to enrich understanding of how our mindset makes sense of personal and societal challenges, and the downstream differential consequences of being impaired versus enriched by the accompanying conflicts and tensions. My research pursuits contribute to the psychological science of climate change and sustainable living, cosmopolitanism and globalization, multiculturalism, social innovation and creativity, paradox management and well-being, working motherhood, and lay beliefs of busyness.

TEACHING PEDAGOGY DEVELOPMENT

2009-2010	In collaboration with the Office of Integrated Information Technology Services (IITS) at SMU, I have developed an e-Learning courseware for teaching research methods. This courseware is also potentially applicable for teaching Social Psychology and Cultural Psychology. The project is an innovative teaching effort that seeks to integrate the use of videos, animations, and many interactive digital features for promoting teaching and learning efficiency. I aim to develop this courseware to achieve user-oriented learning in order to enrich the learning experience of students.
2008	In collaboration with the Center for Teaching and Learning (CTL) at SMU, based on my previous research studies I developed two video cases for teaching research methods in the Social Sciences. For further information and preview of the videos, please visit Faculty Showcases on the IITS website at: https://intranet.smu.edu.sg/iits/Teaching_Support/video_angela.asp
